TECHNICAL SKILLS

Languages: Ruby, C++, C, Python, JavaScript

Frameworks & Libraries: Ruby on Rails, FastAPI, React.js, Next.js, Inertia.js, shadcn/ui

Backend & Systems: PostgreSQL, Redis, Sidekiq, ActionCable (WebSockets), REST APIs

Cloud & DevOps: Amazon Web Services (S3), Docker, Vercel, GitHub Actions

Tools: Git/GitHub

EXPERIENCE

Roam

Jan - April 2026

Software Engineering Co-op

Toronto, ON (Hybrid)

- Built a fleet maintenance system for **500+ vehicles**, automating service scheduling and notifications using **Ruby on Rails, React, and PostgreSQL**
- Integrated **Geotab** and **Samsara APIs** to stream real-time odometer data, eliminating manual entry for **~70% of vehicles**
- Designed **PostgreSQL schemas** and maintenance logic, reducing fleet-wide response time by **~60%**
- Designed event-driven workflows using **Sidekiq** and **Redis** to process fleet updates asynchronously

Turner Fenton Rocketry Association

Mar 2024 - June 2025

Vice President

Brampton, ON

- Directed **software and circuitry development for rockets**, including **Arduino-based flight systems** and launch mechanisms as the **Vice President** of Turner Fenton's **Rocketry Club**
- Designed and **prototyped electrical systems (IMUs, transistors, logic gates, reed switch-activated launch, servo motor control, PCB soldering, PWM)** for safe and reliable launches
- Organized workshops and training to teach **50+ members Arduino, circuitry**, and rocketry fundamentals, fostering STEM engagement and technical growth in the club

PROJECTS

ChefIt - AI-powered pantry optimization system (ConUHacks 2026)

April 2026

- Built a full-stack iOS app using **SwiftUI, Node.js (Express)**, and **PostgreSQL (Neon)**, leveraging **OpenAI** for ingredient parsing and the **Edamam API** for live recipe retrieval
- Engineered a weighted ranking algorithm (ingredient coverage, missing items, expiry prioritization, cook time) to surface “ready-to-cook” vs “almost-there” recipes
- Built **REST APIs** and data models for posts, reviews, and pantry state using **Node.js (Express)** and **PostgreSQL**; handled auth (**JWT**) and media uploads via **Cloudinary**

Polyscope - Prediction market risk scoring engine

Mar 2026

- Engineered a scoring engine to evaluate prediction market risk across 5 dimensions using historical dispute data with **OpenAI embeddings**
- Built real-time analytics pipeline with **Ruby on Rails, Sidekiq**, and **ActionCable** for live score updates

Waterloo ECE 2025 Class Profile Website

July 2025

- Co-developed and deployed a class profile website for the University of Waterloo ECE 2025 cohort using **Next.js (React)**, **TailwindCSS**, and **ShadCN** to strengthen community and networking
- Showcased and categorized profiles of **100+ first-year students** across 2 streams, 3 cohorts, and 2 programs

EDUCATION

UNIVERSITY OF WATERLOO

Waterloo, ON

Bachelor of Applied Science in Computer Engineering

Sep 2025 - April 2030
