EDUCATION

University of Waterloo

Candidate for a BAsC in Computer Engineering

Waterloo, ON

Sep 2025 – Apr 2030 (Expected)

TECHNICAL SKILLS

Languages: Ruby, C++, C, C#, Python, JavaScript, TypeScript, HTML, Swift, CSS, SQL

Backend & Frameworks: Node.js, Rails, FastAPI, React, Next.js, Inertia, PostgreSQL, Redis, Sidekiq, REST APIs

DevOps: AWS (S3), Docker, Vercel, Git, GitHub Actions

EXPERIENCE

Software Developer

UW Reality Labs

Mar 2026 – Present

Waterloo, ON

- Built Unity (C#) VR interaction features for XR prototypes, implementing controller and gesture-based input systems
- Developed Python tooling to log, preprocess, and analyze ~1,000+ spatial tracking and interaction events, integrating real-time sensor streams into Unity to improve debugging efficiency by ~30%

Software Engineering Intern

Roam

Jan 2026 – Apr 2026

Toronto, ON

- Built a fleet maintenance platform for 500+ vehicles using Ruby on Rails, React, and PostgreSQL, automating service scheduling and reducing manual coordination overhead
- Integrated Geotab and Samsara APIs to stream real-time odometer and vehicle telemetry data, eliminating manual entry for ~70% of fleet records
- Designed and optimized PostgreSQL schemas and backend workflows, improving system performance and reducing maintenance delays by ~60%
- Implemented event-driven background processing using Sidekiq and Redis for asynchronous fleet updates, improving system reliability under high update volume

Vice President of Software

Turner Fenton Rocketry Association

Mar 2024 – Jun 2025

Brampton, ON

- Led software development for 2 successful rocket launches, building Arduino-based flight control and launch automation systems from the ground up
- Designed embedded control logic for sensor integration (IMUs, switches, servo control), making Turner Fenton the first high school team to compete at Launch Canada, a national university-level rocketry competition
- Ran technical workshops for 60+ students on Arduino, circuitry, and embedded systems, improving club-wide technical competency and project execution

PROJECTS

ChefIt | AI-powered pantry optimization system (ConHacks 2026)

Apr 2026

- Built a full-stack iOS app in 24 hours using SwiftUI, Node.js, and PostgreSQL, integrating OpenAI-powered ingredient parsing and the Edamam recipe API to surface results from a catalog of 2M+ recipes
- Designed a ranking algorithm to prioritize recipes based on ingredient coverage, expiry date, and cook time, minimizing food waste and maximizing pantry utilization
- Implemented REST APIs and backend services with JWT auth and Cloudinary-based media handling

Waterloo ECE 2025 Class Profile Website

Jul 2025

- Co-developed and deployed a Next.js + TailwindCSS website showcasing 100+ student profiles, with stream-based filtering and responsive UI optimized for mobile and desktop
- Architected profile categorization system supporting multiple cohorts, reducing time-to-find for recruiters and peers browsing the directory
